Zero Waste Single Cup System

Planet Coffee and our customers have partnered to prevent more than 266,300* pounds of Single Cup packaging from going to landfills. That number increases every day!

The Zero Waste Single Cup System reduces impact on the environment in three key ways:

1. **RECOVER - Planet Coffee provides each customer with recycling bins to collect spent Single Cup packaging.**

2. **REUSE - Cardboard from packaging is re-used in packing and shipping of other products.**

3. **RECYCLE - All cardboard that is not re-used is broken down and recycled by a local waste management company. As well, bi-products from the Waste to Energy facility process are recycled back into various raw materials.**

***as of June 2014**

About Waste to Energy Recycling

- Waste to Energy recycling is an efficient, environmentally responsible disposal process that uses waste that would otherwise find it's way to a landfill.
- The Waste to Energy process is environmentally safe.
- The Waste to Energy process is an efficient way to produce energy and reduce waste and greenhouse gas emission from our landfills.
